DISCLAIMER

ORDER POLICY

- Once we have processed your order you will receive an order confirmation email.
- Orders cannot be changed using our online store but you can contact our office who will be able to assist.
- Orders for stocked items can be changed prior to the order being picked.
- Orders for manufactured items that are not stocked can only be changed prior the production work order being released to our workshop.
- Special order and custom make to order items cannot be changed once we have placed purchase orders with our suppliers or released the production work order to our workshop.

FREIGHT & SHIPPING

- We do not hide our shipping cost – the shipping charge you see on your quote or sales order is the charge that will appear on your Tax Invoice
- Most orders for stocked items placed before 12pm (AWST) will be packed, consigned and ready for pickup that same day. Carrier pickup times change from time to time, and we cannot guarantee same day dispatch.
- At time of shipment, you will be notified via email and text message that your goods have shipped. You can use the tracking URL provided to monitor shipment.
- We make use of various carriers. At time of purchase, you will also have the option to ship your goods using the carrier of your choice on your own freight account.
- Every effort will be made to accommodate warehouse pickups from our Perth factory but our preference is to ship goods to your closest depot, this is due to freight carrier congestion during the peak months from July onwards.
- If you do wish to nominate a pick up day for freight we will hold the freight but ship the next business day if no collection has taken place.
- General freight carriers no longer ship direct to farms, when placing your order you need to provide us with a business address or freight depot. Our sales team has a complete list of freight depots and will gladly share these with you.

PRICING POLICY

- Pricing in this catalogue is correct at time of print, always review the order confirmation you receive via your nominated email address.
- Pricing online is always correct unless stated differently.
- Our pricing in this catalogue and online are Ex GST
- Harvestaire reserves the right to change prices without prior notice if there is a price increase from our supplier, an adverse movement in exchange rates or airfreight is used.
- You will receive an order confirmation via email once your order has been processed, all pricing queries must be raised prior to the shipment of your goods and no price credits will be applied post shipment.
- Typographic, Photographic and/or descriptive errors are subject to correction.

PARTS RETURN POLICY

We want you to be completely satisfied with your purchase, If you need to return a product, we are here to help:

- Acceptable reasons for returns include: Product damaged during shipment, Product not as described, or product defect
- Timelines for returns are: You must notify us within 14 days of invoice of your intent to return the product. Once we have approved your request to return the product, you must return the product back to us within 30 Days of receiving the email stating that we have approved your RMA. Strictly no items can be returned or refunded after 30 days of Invoice date, due to buyer's error.
- Restocking fee: If the return is due to a buyers error we may charge a restocking fee of up to 30% of the purchase price

- Refund Process: If you are entitled to a refund, we will process it within 14 Days of receiving the returned product, and the refund will be processed via the original payment method.
- Only products returned in a as new condition will be accepted.
- No returns on custom or special orders will be accepted.
- All part returns must be accompanied by an approved return materials authorization (RMA) form. The RMA form can be accessed by logging onto your account on our online store or contacting our sales team.
- Returned goods without an RMA number will not be accepted, ensure the RMA number the team gives you is clearly visible on the returned package.

WARRANTY AND HARVESTAIRE ADVANTAGE

- Harvestaire warrant that it will repair or replace (whichever it deems advisable) any product manufactured or sold by Harvestaire which proves to be defective in material or workmanship within a period of one year from the date of original purchase on invoice.
- Warranty service can be obtained by completing and submitting a return materials authorization (RMA) form and submitting photos of the defective item. The RMA form can be accessed by logging onto your account on our online store or contacting our sales team.
- When requesting a warranty repair, you do not need to return the item to us, in the event where we are unable to determine the cause of the failure, we might request that you return the part to us, at our cost.
- If found defective under the terms of this warranty, repair or replacement will be made without charge.
- If found not to be defective you will be notified, and in the event where the item was returned to us, the return freight cost will be charged to your account.
- The warranty covers normal use and does not cover damage or defect which results from alteration, accident or neglect or improper installation, operation or maintenance.
- Harvestaire's obligation under this warranty is limited to the repair or replacement if the defective products (up to the purchase price).
- Harvestaire neither assumes or authorizes any other person to give any warranty or to assume any other obligation on its behalf.

Parts in this catalogue are not manufactured by the Original Equipment Manufacturer. Original Equipment Manufacturers' names, part numbers and descriptions are used for reference purposes only.

SMART FARMERS MINIMISE LOSSES

TAKE THE GUESSING OUT OF HEADER CALIBRATION

Australian Made for Australian Farms

“As a local Aussie manufacturer, our preference would always be to support and on-sell products made in Australia. It even makes it easier when those products made locally on offer provide improved on-farm outcomes and can be purchased at a lower cost than the alternative imported alternative.”

Dirk Vorster - General Manager, Harvestaire

GRAIN TANK EXTENSIONS

Extra capacity is measured in relation to the original grain tank without "Hungry Boards".

BIG TOP GRAIN TANK EXTENSIONS

- Folds Down – Easily & Quickly**
- Add up to 3 tonne of wheat to your capacity**
- Complete with wiring harness for bin level sensor and lights on some models**

WARNING: Use of this product is at the owner's discretion. Increasing grain capacity may adversely affect centre of gravity, stability and controllability. Exceeding maximum combine weight loadings can risk structural integrity and drive line components. Harvestaire Pty Ltd does not assume any liabilities, or make any warranties regarding the performance or structure of the combine. See combine owner's/operator's manual for specific limitations, operating recommendations and safety information.

CONQUEST SMART AUGER

The Conquest Smart Auger is the full length of the platform and has a superior capacity compared to other augers. With features that enable simple mounting, the Smart Auger can mount on any draper front.

The versatile Conquest Smart Auger offers all the features to ensure a smooth and even feed in any condition, eliminating bunching, overloading and blockages. Enabling 40% higher ground speed, it could pay off your investment in less than two days.

FEATURES

Angle calibration

Universal centre couplings allows you to calibrate the auger angles to your particular draper front and crop.

Adjustable positioning

Sets the auger at just the right height and distance from the back of your platform.

Steady feed

Large 12" flighting feeds bulky crops without wrapping.

Superior capacity

The full-length auger prevents product build-up and overshoot.

Removable paddle feed

A removable paddle system gives mature product the final nudge into feeder housing.

Combine-proof hydraulics

Hydraulic system designed to allow original oil flow.

Consistent output

A gentle consistent feed ensures optimal grain separation when direct-heading and produces even windrows when swathing.

Simple installation

With features that enable simple mounting, the Smart Auger can mount on any draper front.

Direct-heading your canola can save \$40/ha in harvesting costs compared to windrowing. Whether it's low-density or high-density crops, direct-heading can significantly increase yields, maximise seed size and oil content. But you also know that a poor harvester setup could squander all these opportunities through exceedingly slow travel or unacceptable shattering losses.

A flow divider on top of the hydro motor provides variable speed, it's set and forget – you set it as a ratio to the belt, and once you've calibrated it, it's done.

You know that having the right Equipment is the key!

The versatile Conquest Smart Auger offers all the features to ensure a smooth and even feed in any condition, eliminating bunching, overloading and blockages. Enabling 40% higher ground speed, it could pay off your investment in less than two days.

HARVESTAIRE CROP / LENTIL LIFTERS

Fits all Open and Belt Fronts for Canola
Field Peas & Downed Crops

We recommend one croplifter per foot across the front

"I was blown away at how well they work. Oats were completely flat on the ground and the croplifters were still able to get underneath so the crop could be harvested. The quality of the croplifters is fantastic and are super simple to install. They are very springy so they can be placed right on the ground and will just glide over uneven country." *Victorian Farmer*

WHY OUR KNIVES?

HARVESTAIRE MANUFACTURE HEADER KNIVES

Why would a farmer choose a Harvestaire knife over an OEM?

Harvestaire Knives are made inhouse to original OEM specifications and are transported in lengths that make it easy to fit a new knife in a timely manner. Being made local means costly down time can be reduced as a knife can be made and shipped the same day.

There are two main advantages which are offered to farmers.

- The back bone of the knife is made from steel sourced from the USA which is the same as used by OEM's
- Knife Sections are supplied from the same factory that make for OEM's

BENEFITS

- Made to OEM specifications
- Knife sections are supplied from America by the supplier to OEM's
- Can be supplied in either Full knife, Half knife or Backbone only
- Can be couriered across Australia
- Transported in PVC Tubing up to 6 Mtrs long for better protection
- Manufactured from solid 19 or 21mm backbone or in Laminated sections
- Made to suit Draper or Rigid Header fronts and also for hay machines
- Quicker installation not having to preassemble sectional knife back
- Available for most makes and models. Harvestaire manufacture all knives in-house. If you can't find your knife listed, call us as we can make to sample

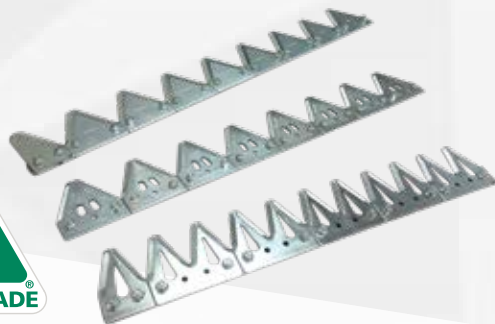

Harvestaire Advantage

Giving you peace of mind to get you through harvest.

Harvestaire Advantage 18-month warranty applies to all Harvestaire manufactured parts.

"We continue to strive toward outstanding quality and performance on every aftermarket part that we build" "There has never been a better time to purchase Harvestaire manufactured aftermarket parts, and this new, longer warranty proves our parts are built to last and we stand by our quality".

Dirk Vorster - General Manager, Harvestaire

CANOLA & LUPIN BREAKERS

These simple serrated brackets are attached to the cross auger on rigid fronts to help break up bulky lupin or direct headed canola so the crop feeds more evenly. Easily retracted out of the way for cereal crop harvesting.

Part No.	Description	Price
HP684	Canola and Lupin Breaker Includes Nut & Bolt Hardware 4x Recommended per Machine	\$18

LESS FLIGHTING AND MORE FINGERS SO NOW YOU CAN USE THE FULL WIDTH OF YOUR MACHINE

- ✓ Plug-in, Plug-out Easy Replacement
- ✓ Complete on arrival with internal components fully welded & assembled
- ✓ Speeds up Harvest in Bulky Crops like Canola and Barley
- ✓ Cost effective preventative solution
- ✓ Saves on fuel costs during harvesting

HISTORY

The RetroDrum has it's humble beginning in Esperance, WA during 2016 harvest. Previously known as the Turbodrums, this product was developed with a farmer who had an idea to replace his feed drum for his MacDon harvester.

The first version of Retrodrum sold over 400 units over the first 14 months and has gone on to sell 13 model types in 4 countries, namely Australia, New Zealand, Canada and USA.

CRARY WIND SYSTEM

BUILT FOR AUSSIE CONDITIONS.

The CWS works by using the existing tyne reel and adding a manifold in front of the reel to produce a curtain of high velocity air over the cutter bar, feeding more crop over the knife, more crop in the grain bin & more money into farmers' pockets.

GEAR BOX BENEFITS

- ✓ A Parallel shaft design reduces wear points and imposes field serviceability making it easy to maintain
- ✓ 45% less moving parts compared to the competition that are sealed and out of the elements
- ✓ Compact design packs a punch allowing us to provide enough air for a 40 foot plus headers from a single fan when combined with a Dual Flow system
- ✓ Gear drive eliminates losses due to belt slippage

ADDITIONAL FEATURES

- ✓ Flex hose allows fore and aft adjustments on-the-go
- ✓ 12 Volt Electric Actuator allows for precise positioning of air curtain with in-cab controls
- ✓ Direct Drive Gearbox™ efficiency drives the fan rotor
- ✓ Optional Brush Kits reduce material buildup
- ✓ Crary 8" custom fan generates high velocity air flow

DUAL FLOW™ TECHNOLOGY

Provides airflow in two directions creating an even curtain of air across the entire cutter bar. The Crary manufactured fan coupled with Dual Flow system can produce wind speeds in excess of 300 kph at the cutter bar on fronts up to 45 feet.

LONG LASTING

The Crary® high pressure fan utilizes a Crary® Infinity Steel Rotor™. Natural dust and dirt particles can be coarse and abrasive. The patent-pending carbide-clad lower blade edges are designed to increase the longevity of your air system.

LESS VOLUNTEER CROP GERMINATION

Additional yields also means less volunteer crop germination during the following seasons preparations for seeding and reduces costs via less summer spraying.

GEARBOX DRIVEN

Air is supplied by an 8" blower shaft and driven by a Series II Gearbox™. This gives the CWS more air than competing wind systems that rely on belt driven fan rotors. A gear-driven system requires less horsepower, gives you more air, and a consistent air stream that doesn't slip like belts do under load.

INCREASE YIELD

Australian farmers have measured up to 400kg/Ha overall losses off the front alone while harvesting lupins. The addition of a CWS to your harvesting operation has been proven to significantly reduce these losses which in effect increases overall yield.

REDUCE SHATTER LOSS

Proven particularly effective for shatter-prone crops such as lupins and barley.

FASTER GROUND SPEEDS

Farmers report they no longer wait for bunched crop to clear the platform. Faster ground speeds increase profits and reduce fuel expenses.

AFTER SALES SUPPORT

Crary® systems carry a warranty guaranteed to protect against manufacturing defects and Harvestaire carries a range of spare parts to minimize any downtime.

SPROCKETS FOR GRAIN ELEVATOR CHAINS

IMPORTANT NOTE:

Before installing one or more sprockets, do a visual inspection on the used sprockets you plan to run together with a new sprocket. If you notice a substantial wear factor in any, then it is important to replace all the sprockets.

Sprockets For Grain Elevator Chains Continued On Next Page

SPROCKETS FOR GRAIN ELEVATOR CHAINS

IMPORTANT NOTE:

Before installing one or more sprockets, do a visual inspection on the used sprockets you plan to run together with a new sprocket. If you notice a substantial wear factor in any, then it is important to replace all the sprockets.

POSIFEED ROLLERS

- ✓ Made as a triangular shape with rings for the chains to run on
- ✓ Points of the triangle "bite" the crop material and positively feed it
- ✓ Crop taken away more effectively due to triangular design
- ✓ Crop feeds in more smoothly and doesn't feed in lumps

POSIFEED ROLLERS OVERCOME POOR FEEDING AT THE FEEDER HOUSE AND ARE USED AS A REPLACEMENT ROLLER

KONDEX KX7 HELICALS

Kondex KX7 Helicals concave kits are designed for farmers who traditionally run aftermarket helical concaves with their standard OEM or aftermarket wire concaves.

The KX7 superior machined helical design, meets the crop head-on for more immediate threshing. Kits include two rows of KX7 concaves which are installed in the front, the most critical threshing position.

"We ran the KX7 Helical Kit in our S780 this harvest. We saw a 10-15% increase in capacity with a noticeable reduction in rotor loss. We also had nowhere near the same amount of concave rattle we would typically have with OEM concaves".

AXIAL FLOW AND ROTARY MODELS

CONVENTIONAL

Available on Request

FULLY MACHINED CONCAVES THAT MAKE A REAL DIFFERENCE TO YOUR THRESHING.

The placement of Helical bars in these concaves is used so the material approaches bars at right angles – this gives a greater threshing action. This improved threshing action gives you more harvesting hours per day in tough crops. CaseIH Axial Rotor Machines show excellent improvement in threshing capability when fitted with helical concaves. If you have a specialty rotor, use them with Gorden Rotor Bars for the ultimate performance improvement. Use one or two segments in JD and CaseIH (except CaseIH 8010-9240 – needs a set – one left and one right).

Most harvesters now use a Rotary or Axial Flow threshing cylinder design. This has increased tonnes per hour dramatically in recent years. A properly tuned harvester will thresh and separate to a high standard. Because clearances of rotor bars from concaves are commonly greater than more conventional concaves they are often regarded as not so critical. But clearances are critical whenever threshing gets hard and concaves have to be closed up. So we strongly recommend rotor bars are shimmed to a uniform clearance off the concaves so you are ready for tough threshing conditions.

GORDEN ROTOR BARS

Gorden

Gorden Bars are cast in long life 15-3 solid chrome alloy. The Chrome is right through the bar. Chrome is always present to resist wear.

HOW DOES IT WORK Gorden Rotor Bars overlap each other to get more crop pressed against the concave modules. This Results in better thrashing and separating.

- ✓ Decrease rotor loss because separation happens sooner in the concaves
- ✓ Less white caps & less grain breakage
- ✓ More grain in the tank - Increase capacity
- ✓ Less HP and less Fuel

Fits AFX Headers 1640-9230 in the Case header.
“After 2000 hours you can barely see any wear.”

- ✓ Certified Australian Made
- ✓ Performance outperforms originals
- ✓ Nylon anti-wear bushes on all wires drastically reduce wear
- ✓ Easily replaceable wires and louvres
- ✓ Strong louvre design prevents distortion

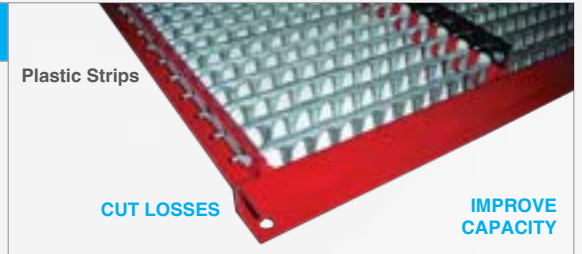

STANDARD LOUVRE TOP & BOTTOM

Our top and bottom sieves perform the same as originals, but have nylon bushes so they don't wear out!

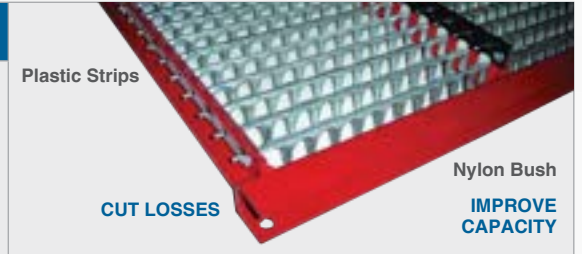

AIR FOIL LOUVRE BOTTOM SIEVE

AirFoil bottom sieves are virtually impossible to overload as the louvres do not deflect or close up under a heavy stream of grain as is frequently the case with traditional bottom sieves, particularly when they are worn. This makes normal sieves very difficult to adjust. It's common to find the normal sieve either putting too much good grain in the repeats or letting too much rubbish in the sample.
Strong Louvre Design prevents distortion caused by the weight of grain.

AIR FOIL LOUVRE TOP SIEVE

Airfoil Top Sieves have a unique Louvre design that divides the airflow and creates a bed of air jets which floats chaff up off the surface allowing heavier grain to easily separate and fall.

Wires and louvres can be replaced. Nylon anti-wear bushes on all wires to drastically reduce wear.

Harvestaire manufacture all their sieves inhouse. If you don't see it listed call us. We can make to order.

These Sieves will get you through the tough receival standards.

This special mesh sieve has been specifically designed for Canola. If you are experiencing trouble with a Dirty Sample the use of our Mesh Sieve should clean up your canola and avoid the need to grade it after Harvest. These Sieves are fitted with Expanded Metal Mesh. We guarantee these Sieves will get your Canola clean enough to meet receival standards.

PLEASE NOTE: Being a Mesh Sieve, occasional cleaning with a simple scraper may be required if your Canola crop has radish, volunteer cereals, green or excessive trash.
